Plant Specialist Predicts 'Seedless Watermelons'

In about three years you'll not have to worry about the seeds when you eat watermelon; there won't be any.

This welcome news has been announced by Dr. Chung Yin Wong, Chinese horticulturist of Michigan, who has been experimenting with plants for seedless fruits.

Dr. Wong's successful experiment of a seedless watermelon melon may arrive at the market in three or four years.

The method of developing fruits without seeds is simple, he said, "but the success depends largely on the efficiency of applying the method."
